aqibyousuf098@gmail.com | +92 327 1223399 | Karachi, Pakistan

PROFESSIONAL SUMMARY

Data generalist with 3+ years of end-to-end experience across product analytics, user research, and growth experimentation in high-growth B2B SaaS environments. Strong SQL practitioner with hands-on experience in product event data, cohort modeling, churn prediction, and behavioral analytics using Mixpanel and SQL on large datasets. Comfortable going from messy question to structured problem to shipped recommendation -- owning the full path rather than one layer. Experienced running user interviews and feedback loops alongside quantitative analysis, giving a complete picture of product and growth problems. Not a dashboard maintainer -- a problem solver who uses data to drive decisions. Comfortable with ambiguity, fast-moving environments, and working directly with stakeholders across product, growth, and commercial functions.

WORK EXPERIENCE

World Bank Group — Consultant

Dec 2025 – Present

- Owning end-to-end data collection, modeling, and reporting for a longitudinal impact evaluation in Karachi -- from survey instrument design and field data collection through to statistical analysis in R and structured reporting for program leadership, with no middle layer between question and output.

DigitalOcean — User Researcher, Cloudways

May 2023 – Sep 2025

- Ran end-to-end product and growth analytics for a self-serve B2B SaaS platform (\$100M+ ARR), going from raw behavioral data in Mixpanel and SQL to usable models to shipped recommendations -- covering acquisition funnel, activation, retention, and expansion across a PLG-adjacent product motion.
- Built logistic regression churn-prediction models in R on SQL-extracted event and behavioral data, applying cohort analysis to identify drop-off patterns and at-risk segments; proposed and drove a retention initiative that improved retention by 10% over 3 quarters based directly on model output.
- Designed and ran growth experiments including A/B tests and large-scale surveys (n=300-2,000) to evaluate the impact of product, pricing, and UX changes on adoption and upgrade behavior; applied statistical significance testing to separate signal from noise and push teams toward specific next actions rather than leaving them with findings to interpret.
- Combined user interviews, usability testing, and product event data to build a complete picture of user needs and friction points -- running qualitative feedback loops alongside quantitative analysis to frame problems before jumping to solutions; AI Copilot research drove a 30% adoption lift and 20% upgrade rate.
- Built PowerBI and Tableau dashboards and analytical models that gave Product, Growth, Marketing, and Commercial teams self-service access to the metrics that mattered, reducing ad-hoc analysis requests and accelerating decision-making cycles.
- Worked directly with senior stakeholders across product, engineering, marketing, and revenue to frame problems, challenge assumptions, and translate complex data findings into prioritized, actionable growth opportunities.

Habib University — Researcher

Jun 2022 – Feb 2023

- Conducted quantitative research combining large-scale survey design and statistical modeling in R and Stata; contributions acknowledged in 3 peer-reviewed journal publications.
-

EDUCATION

Bachelor of Science (Honours), Social Development & Policy — Habib University

Aug 2018 – Jun 2022

SKILLS & TOOLS

Data & Analytics: SQL (advanced, daily use), R, Python, Stata -- cohort analysis, churn modeling, logistic regression, A/B testing, statistical significance testing, funnel analysis, behavioral segmentation, event data analysis, data modeling

Product & Growth Analytics: Mixpanel (product and event analytics), Amplitude-equivalent workflows, PLG funnel analysis, activation and retention modeling, growth experimentation, pricing impact analysis, user feedback loops

Stack & Tools: Tableau, PowerBI, Qualtrics, Maze, Dovetail, Mixpanel, Jira, Miro -- plus AI-assisted analysis (Copilot, Claude) for accelerating synthesis and analytical workflows

Research & Stakeholder: User interviews, usability testing, survey design, mixed-methods research, problem framing, stakeholder alignment, insight-to-action delivery
